To the CHAIRMAN and MEMBERS of the CLOWNE RURAL DISTRICT COUNCIL.

BOLSOVER,

APRIL, 1926.

GENTLEMEN,

I beg to lay before you my Twenty-fifth Annual Report upon the health of the District for the year 1925.

Especially do I wish to draw your attention to the favourable position your district holds with respect to the general conditions of health.

The Infantile Mortality has been reduced from 102.2 in 1919 to 93.3 for 1925, the death-rate 10.4 is one of the lowest on record. On the other hand the birth-rate is very low, 24.08, although slightly higher than last year.

I have compiled an appendix to comply with the regulations of the Ministry of Health, which will be found valuable and instructive.

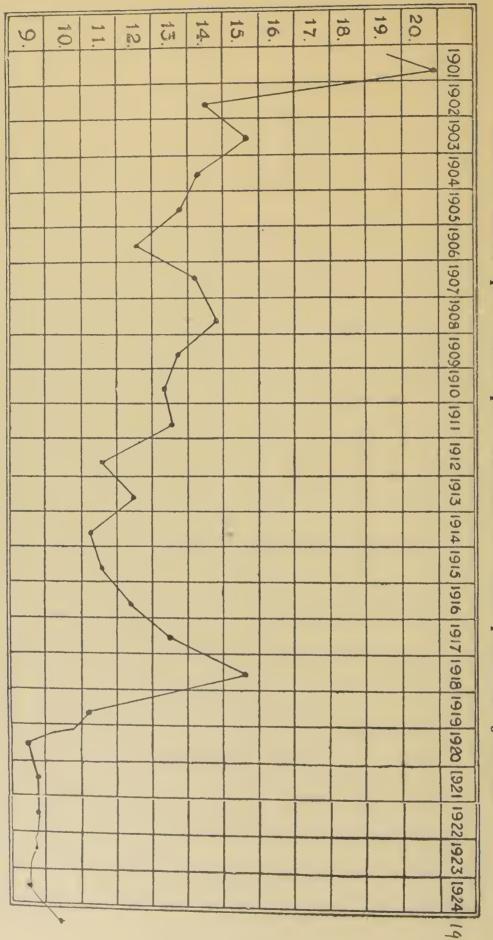

I also take this opportunity of thanking the Council for the continued courtesy and kindness at all times extended to me.

I am, Gentlemen,

Your obedient Servant,

WALTER SPENCER.

DEATH RATE per 1,000 per annum for the past 25 years.

GENERAL STATISTICS.

AREA IN ACRES:

Land			13,395	
Water		•	41	
	Total		12 126	acres

Elevation of District:

Varies from 240 to 500 (O.D.).

Geology:

On Magnesium limestone, which overlies the coal measures, with thin layer of sandstone between.

** REPORT. **

Death Rate. The Death Rate 10.4, is one of the lowest on record, the nearest being in 1920, 1923 and 1924, when the rates were 9.7, 8.5 and 9.5 respectively.

In view of the fact that the Clowne Rural District is essentially a mining district, in which fatal accidents are fairly frequent, the Death Rate may be considered highly satisfactory.

Birth Rate. The Birth Rate shows a slight falling off over last year, when the rate was the lowest on record.

The same factors have operated in producing this low rate as were responsible for the low figure last year, viz., an acute shortage of houses, in all the four parishes, with the natural result that young people are reluctant to get married; in spite of this only 19 illegitimate children were born. This seems to me to speak highly for the morals of the district.

The Registrar General estimated the population in June, 1925, to be 18,690.

Infantile Mortality. The average Infantile Mortality Rate for the present year is 93.33, which shows a great improvement during the last few years, although the rate is not quite so good as last year, when it was 75.3.

Hospital Accommodation. While there are no hospitals in the immediate neighbourhood, satisfactory accommodation is provided by hospitals outside the district.

Ample accommodation has been provided for all the infectious cases by the North-east Derbyshire Isolation Hospitals where they have been dealt with in a highly efficient manner and the comfort of the patients has been fully maintained. The general hospitals at Chesterfield, Worksop, Mansfield, Nottingham and Sheffield have dealt with such medical and surgical cases as needed special attention. The Royal Infirmary, Sheffield, in particular has taken over an increased number of cases both as In-patients and as Out-patients, while the Jessop Hospital has been most generous in the matter of beds.

1. Water Supply. This is obtained from the Manton Colliery Shaft, and comes from the "Bunter Bed." The supply is constant, abundant, and of uniformly excellent quality.

It contains but a small portion of suspended and dissolved solids and is of a total hardness of approximately 12.

2. There is no river in the district, but the two small streams, one between Barlborough and Renishaw, and the other between Creswell and Whitwell, are carefully guarded against pollution.

There are no present or probable sources of contamination of the water supply.

3. Drainage. The drainage of the district is satisfactorily carried out with a few exceptions, the principal exception being the one at Whitwell Common and Whitwell.

Sewage disposal is effected by means of septic tanks, filtration, and land irrigation.

4. Closet Accommodation. This at present is chiefly represented by privy middens, to a less extent by pail closets, and least of all by water closets. The figures for the entire district are as follows:—

Number of houses with-

(a)	Privy Middens			1,969
(b)	Pail Closets			1,365
(c)	Water Closets (in	cludi	ng	

2 slop water closets) 498

Whenever a new house is erected it should be provided with a water closet and steps should be taken to make this rule binding. In view of the abundance and cheapness of the water supply, there is every facility for the installation of such closets. The adoption of such a bye-law would result in a great improvement of the health of the district, since fly-born infection would be considerably reduced.

- 5. Scavenging. The work of scavenging in the District is done by contractand has been conducted on the whole satisfactorily. With the exception of the work done at Barlborough there has been little to complain of, but in the case of the contractor there, difficulty has been experienced in getting him to do the work. It is becoming increasingly difficult to find places for refuse tips—sooner or later destructors will have to be provided.
- 6. Sanitary Inspection. Details of this will be found in the appended report of the Sanitary Inspector.
- 7. Food. (a) MILK SUPPLY. This has been supervised with great care and special attention has been devoted to a strict inspection and supervision of the Dairies and Cowsheds in the District, and their cleansing and lighting has been made a matter of especial care.
- (b) MEAT. The inspection of meat has received great attention during the past year, and there has been little to complain of. 942 lbs. of beef have been destroyed as being bruised and unfit for sale. A great number of inspections have been made and in consequence everything has been kept well up to the mark.
- (c) OTHER FOODS. Efficient inspection has been carried out and the quality of the food and the conditions under which it is handled have been maintained at a high level.
- 8. **Housing.** The number of houses in the District is 3,832, an increase of 34 on 1924. This however, is merely proportional to the increase in population and provides no improvement in accommodation. The average number still residing in one house is still a fraction under 5. The position therefore remains unaltered and there is still the same pressing need for increased housing accommodation, and for improvement of the existing property.

Under the new Housing Scheme it was proposed to build 201 new houses. 156 have been completed of which 34 have been occupied.

The general standard of housing is satisfactory, many of the old houses during the past five years (which were unfit at one time) have been repaired, and only a few can be said to be unfit for habitation. Two have been demolished and one stands empty.

UNHEALTHY AREAS .- None.

HOUSING STATISTICS FOR THE YEAR 1925.

	Number of New Houses erected during t	he	year	•	34	-
	By Local Authority under 1923 Act .		•		33	3
	By private enterprise		•		1

	remedied after formal notice:					
(a)	By owners				4	10
(b)						
(c)						

9. Notifiable Diseases. The number of cases of infectious diseases notified in the district is not so great as last year.

In 1919 331 cases were notified.
In 1920 149 ,, ,, ,,
In 1921 69 ,, ,, ,,
In 1922 73 ,, ,, ,,
In 1923 242 ,, ,, ,,
In 1924 224 ,, ,, ,,
In 1925 161 ,, ,,

More details are appended in the tables.

The requirements as to the notification of tuberculosis have been conscientiously observed by all concerned.

- 10. Maternity and Child Welfare. Considerable progress has been made in this very necessary movement during the year, although much hampered by the Smallpox epidemic. The low Infantile Mortality is proof of the success of the scheme.
- II. Sanitary Administration. The work of the Sanitary Inspector has maintained a uniformly high level throughout the year and is epitomised in his report, which is appended.

12. Further Sanitary Requirements.

- (1) Adoption of Water Closets. Urgent.
- (2) Provision of further Housing Accommodation. Urgent.
- 13. **General Survey**. On the whole the outlook is good. In no particular has retrograde movement taken place. In one particular, however, namely the establishment of water closets and the conversion and improvement of privy middens, little or no progress has been made.

Further housing accommodation is urgently required, as overcrowding is prevalent and it is impossible, at present, to condemn houses really demanding this step.

The appendix at the end of this report is prepared at the request of the Ministry of Health and contains much information.

I am, Gentlemen,
Your obedient Servant,
WALTER SPENCER,
M.O.H.

CLOWNE RURAL DISTRICT COUNCIL.

Infectious Diseases.

The work under this heading has been about similar to last year. The number of visits to premises where cases occurred being 198, and the number of rooms disinfected 80.

Tuberculosis Shelters removed and repaired 2.

Inspections of these shelters have been made at intervals during the year.

Cowsheds and Milkshops Orders. The Cowsheds and Milkshops in the District have been visited at frequent intervals during the year and strict attention paid to the limewashing etc., of premises.

The No. of inspections made were 147.

Factory and Workshop Acts. Under the above Acts all Workshops and Bakehouses have been visited at frequent intervals, and Notices served when necessary.

No. of Workshops 35, Bakehouses 7, Visits 112.

Food Supplies. The Slaughterhouses and Meat Shops are visited with strict regularity. On April 1st the new Meat Regulations came into force. With respect to slaughterhouses and slaughtering, these regulations are of far more importance to Local Authorities than anything before authorised by the Ministry of Health, and consequently the amount of work has increased accordingly. The work of inspection had to be organised on different lines. Owing to Notices of Slaughter having to be given by the butchers I instituted a system of cards and forms to be kept, so as to get at a fairly accurate account of the number of animals slaughtered, and below is given the result of 9 months from April 1st, 1925.

RECORD OF THE NUMBER OF ANIMALS SLAUGHTERED.

Beasts Sheep & Lambs Pigs Calves Total 1,074 1,367 1,756 164 4,361 Included are 54 pigs killed by Cottagers.

Food Surrendered.—942 lbs. beef, 222 lbs. livers, etc., 94 lbs. veal, 48½ lbs. pork. Tinned foods—22 tins, 4 couples rabbits and one bag of mussels have been condemned as unfit for human consumption. In addition a strict outlook has been kept over general food supplies, and frequent visits paid to the Market at Clowne.

1,455 visits have been made to the different premises in the District and the meat for sale examined. Quality of meat usually good. Number of other food visits 941.

Scavenging. The scavenging of the District on the whole has been good, only a very few complaints having been received. The Contractors (under strict supervision) do the work fairly well.

The estimated number of houses in the District is 3832, including 34 built and occupied during the year, all of which have been provided with WATER CLOSETS.

The Tips are visited at intervals and Virus laid down for rats.

The SUMMARY enclosed gives the amount of work done during the year.

In conclusion I have again to thank the Council for their courtesy and support throughout the year.

I am, Gentlemen,

Your Obedient Servant,

J. BRADLEY, C.R.S.I.,

Sanitary Inspector.
